Education

Bachelor in Computer Engineering

University Fernando Pessoa, Porto, Portugal

2019-2022

- **Focus:** Software Development, Full Stack Development, Cloud & DevOps.
- **Relevant coursework:** Algorithms, Data Structures, Databases, Software Engineering, Cloud Computing, Networking.

Technical Skills

Programming Languages: Java, Python, TypeScript, SQL

Frameworks & Tools: Quarkus, Angular, Docker, Kubernetes, KEDA, Git, GitHub Actions, JUnit

Databases: MySQL, PostgreSQL, MongoDB.

Cloud Platforms: Azure.

Other Skills: CI/CD pipelines, Agile & Scrum, RESTful APIs, Event-Driven Architecture, Prometheus & Grafana monitoring, Microservices architecture.

Professional Experience

Backend Software Developer, Porto, Portugal

Sep 2022 – Present

- Developed and maintained backend microservices using Java and Quarkus, exposing REST APIs for multiple internal systems.
- Built CI/CD pipelines with GitHub Actions and deployed containerized applications using Docker and Kubernetes on Microsoft Azure, implementing horizontal scaling strategies for batch workloads with KEDA.
- Monitored production services with Prometheus and Grafana, configuring alerts to improve observability and system uptime.
- Contributed to Angular frontend development, integrating features with backend APIs, while collaborating in Agile Scrum teams to deliver incremental releases and maintain production stability.
- Focused on backend architecture, cloud infrastructure, and event-driven systems to enhance overall system performance and reliability
- Optimized microservices for maintainability, observability, and full-stack integration within cloud-native environments.

Projects

AI4RealAg – Final Year Project

- Developed a cross-platform mobile app using Flutter and Dart, with a backend powered by FastAPI and PostgreSQL, consuming IoT sensor data to provide crop insights for farmers.
- Built a proof-of-concept (POC) in collaboration with Siscog, feeding into their ongoing AI-powered agriculture platform.
- Integrated AWS S3 for data storage and connected to an AI/ML API to perform real-time fruit counting and analysis.
- Focused on modular architecture, full-stack development, and cross-platform functionality, demonstrating scalable and maintainable design.
